PRICES REALIZED

1999 to 2013

This Prices Realized listing includes only those tokens listed by Ron Benice in his "Alaska & Yukon Tokens," 3rd edition. Benice numbers are used. Prices are primarily from eBay and a few other random sources. This is not a comprehensive list. Prices have been rounded, eliminating the cents. No effort has been made to identify sources. This list of prices realized is offered as a guide only. Conditions are generally not noted, and these could affect the prices realized. If the price realized seems too high or too low, it is probably a typo. **Note:** Please read the prices carefully. The O of OB could be mistaken for a 0 (zero), thus multiplying the actual PR by a factor of 10!

While this is a pretty good indicator of rarity, many other tokens were offered for sale, but did not sell. These are not reflected in the "populations" below. The tokens that went unsold on eBay are still part of the market and must be taken into consideration when trying to establish a value.

These unsold tokens are listed in the yearly prices realized. The yearly lists give a better idea of what is actually out there. They also show the opening bids on those items that did not sell, many times showing a token that was offered several times before it sells. Multiple offerings of the same token show up in the yearly reports, indicating a small group becoming available (short of a hoard). This is not readily apparent on this listing. The yearly listings also include other items of interest that are not listed in Benice.

Many lesser valuable tokens were not included in the 1999 to 2008 listings. Since then, I have been recording some of these. Reporting of the value of tokens thought to be common, or with prices realized of less than \$30 has not been consistent. Some varieties (I, II, III, etc.) have not been differentiated. This is due to not being able to tell which variety the token might be, or just failure on my part to note it.

Hoards always make life interesting. Many are obvious, while others are inferred. The Gambier Bay hoard (see May/June 2013 for a full account) has drastically reduced the value of these tokens. The good news is that it was handled in an above board manner, and the tokens were sold at a reasonable price based upon their availability. The Fairbanks Bentley Dairy tokens hoard will be interesting as most looked to be corroded. I suspect nice quality examples will still bring a reasonable price, while the corroded hoard tokens markedly less. The Platinum Alaska Traders and Cordova Northern Drug sort of snuck up on me, but the market seems to have adjusted.

Some tokens are just so plentiful, that when I think I have a representative list of prices realized, I shut that entry down. These tokens will exhibit a very narrow trading range. This is indicated with a ¶. I probably should have done this to many other tokens.

So many of the lower value ARRC tokens have been offered, that the 1¢ through 50¢ tokens are not listed. The \$1, \$5 and \$10 are listed. Further, a special section for all ARRC tokens that have been graded by PCGS or NGC can be found at the end of the listing. Keep in mind that some of the \$1, \$5, and \$10 tokens in the general listing might have been slabbed, and I failed to make note of it.
